What is the L³C? The creator of the L³C, Robert Lang, calls it the “for profit with the nonprofit soul.” It operates in the space between the nonprofit and the pure for profit organization to perform a social mission. A type of LLC, the L³C (Low-Profit Limited Liability Company), is able to bring together a mix of foundations, trusts, Donor Advised Funds, endowments, pension plans, individuals, corporations, nonprofits & governmental entities and others in order to achieve social objectives while operating according to for-profit metrics. Just like any LLC, an L³C has the liability protection of a corporation and the flexibility of a partnership.
The L³C (Low-profit Limited Liability Company) is not a nonprofit. It is a for profit venture that under its state charter must have a primary goal of performing a socially beneficial purpose not earning money. The legislation was specifically written to dovetail with the federal IRS regulations relevant to Program Related Investments (PRIs) by foundations. This makes it a perfect vessel for PRI investment. It also facilitates layered investing with the PRI usually taking first loss position thereby taking much of the risk out of the venture for other investors in more secure levels. The rest of the investment levels become more attractive to commercial investment by improving the credit rating and thereby lowering the cost of capital. It is particularly favorable to equity investment. Because the foundations take the highest risk at little or no return, it essentially turns the venture capital model on its head and gives L³Cs a low enough cost of capital that they are able to be self sustainable.

This makes the L³C the perfect engine for low cost, highly effective, socially beneficial directed economic development and job creation.

The L³C can help without government investment. Since profit is not its primary goal, a structure can be created to maximize the social benefit and attract investment dollars heretofore not available to the public sector.

An L³C might buy a run down industrial building in a depressed area, rehab it, make it green, reequip it and lease it out at low rates to a business willing to locate in the area and create new jobs from within the community.

It is the ideal vehicle to incubate new technology or enhanced technology for struggling industries and provide significant employment. It could save vital but dying industries such as newspapers which need investment for new technology.

An L³C could be formed to rehab an old theatre building complete with complementary businesses such as a restaurant and a parking garage and use some of the revenues to subsidize theatre productions.
An L³C might be organized to build and run a charter school. In that case, the mezzanine financing of the school would be sold to parents who would, by virtue of their membership in the L³C, have a vote in how the school is run.

The Montana Food Bank Network is using an L³C to build and operate a new food company, Endless Sky L³C. Endless Sky L³C will produce and sell a retail product line, while using the revenues to cover the costs of processing food for the Food Bank Network. It will buy food from local farmers who do not have a current local outlet for higher value crops. So in addition to reducing the cost of feeding the hungry and providing more nutritious food to the hungry, it will create jobs and provide improved opportunities for farmers.

The L³C is the future of BioTech. As Chris Larson pointed out in his American Chemical Society blog: The structure of an L³C is designed to create a microenvironment conducive to the simultaneous investment of private and not-for-profit capital.

Ownership is layered, and risk and reward is unevenly spread over a number of investors.... If adopted more widely in the U.S., the L³C structure could be a win-win for both sides of the biotech entrepreneurial struggle, as investors/donors would then have the possibility of sustainability and return through ownership versus pure charity, and scientists and other start-up founders could then have access to a fresh new pool of money willing to invest in deals of a scale, and with a time horizon and expected rate of return, that traditional investors of the last several years have forgone.

Another point is that the L³C as a for profit vehicle would pay taxes not drain money from the public coffers. As an llc it can either “grow up” and turn into a viable commercial enterprise or remain a quasi non profit but be self sustaining.

Vermont, Wyoming, Utah, Illinois, North Carolina, Maine, Rhode Island, Louisiana, or Michigan. L3C, like a Delaware corporation, can be used anywhere. The L3C bill is now active or about to become active in many other state legislatures.

The L3C was built on the LLC structure in order to provide the flexibility of membership and organization needed to cover a wide variety of social enterprise situations. It also makes it very easy for anyone familiar with business structures to grasp since it does not create a new structure but merely amends the definition section of the LLC act in most states. That leaves 15+ years of legislation and litigation that is behind the LLC intact behind the L3C.

Probably more importantly than anything else, the L3C is a brand which stands for all this and more. Hopefully, as a brand it will make the concepts easy to grasp and thereby frequently used. We believe that social enterprise is the "next big thing." The middle class American is tired of investment bubbles, convoluted financial schemes, and giant corporate entities that treat employees like inventory to be revalued and dumped as the "market" dictates. They want to work in kinder, gentler places that have high social values and treat workers as the most important resources. They want to invest their money where they know it will not disappear when another bubble bursts and most of all they want stability in their lives.

Everyone also knows that government at all levels is effectively broke. It needs to shrink not spend more money it does not have. The L3C has the opportunity to fulfill those desires while operating under the efficiency of a for profit structure. A significant benefit of the creation of jobs through a partnership of foundation investment and private dollars is that all the jobs created will lead to increased tax revenues at no expense to the government!
